

Project Profile

In all of its business endeavors throughout the world, Rolta has been guided by a single underlying objective: to provide the highest quality GIS technical and conversion services at the most competitive prices.

Rolta prides itself in providing cost-effective services while maintaining the highest level of quality, which is evident in our ISO 9001 certification.

With facilities in North America, Europe, India and the Middle East, Rolta covers the globe, and our GIS Conversion Centres are state-of-the-art facilities that feature the latest hardware and software—as well as more than 1000 highly qualified and skilled personnel.

Bahrain Telecommunications

Bahrain Telecommunications Company (Batelco) is a long-time user of Intergraph technology for the telecommunications industry. Batelco maintains 300,000 access lines in the country of Bahrain.

Under subcontract to Intergraph Middle East LLC, Rolta is significantly enhancing prior data conversion efforts in order to create a complete GIS for Batelco. This project includes the following tasks:

- Redrawing of all existing cabling from schematic representation to geographic representation
- Creating connectivity to the pair level
- Customizing ActiveFRAMME to conform to BTC requirements
- Restructuring the data for more automated functions
- Incorporating topographic, cadastral, satellite and photography information

The final phase of the project will include the implementation of an Intergraph G/Comms GIS model and migration of the data from ActiveFRAMME to the new G/Comms model.

The project was started in 2000 and will be completed in 2002.
