

Project Profile

In all of its business endeavors throughout the world, Rolta has been guided by a single underlying objective: to provide the highest quality GIS technical and conversion services at the most competitive prices.

Rolta prides itself in providing cost-effective services while maintaining the highest level of quality, which is evident in our ISO 9001 certification.

With facilities in North America, Europe, India and the Middle East, Rolta covers the globe, and our GIS Conversion Centres are state-of-the-art facilities that feature the latest hardware and software—as well as more than 1000 highly qualified and skilled personnel.

Oman Telecom

Oman Telecom (Omantel), with approximately 350,00 access lines, provides telecommunication services to the Sultanate of Oman.

Under subcontract to Intergraph Middle East LLC, Rolta is converting the outside plant records of Omantel—consisting of over 25,000 telephone maps and associated engineering drawings—to an Intergraph ActiveFRAMME GIS model. The conversion program requires the manipulation of data to fit within 1-meter satellite imagery of certain areas. Rolta is providing the application-development support and customization of interfaces to Omantel's existing Customer Information System data, which features on-line interactive query and reporting functions from the FRAMME application. The system is being deployed in Engineering, Construction and Customer Services offices throughout Oman.

The project was started in 1999 and is scheduled for completion in 2002.
