

Empower business agility, deliver quick wins and rapid ROI

ROLTA TUSC UNITES BUSINESS-DRIVEN APPROACH WITH INNOVATIVE, MODULAR TECHNOLOGY

BUSINESS CHALLENGE

In today's marketplace, your ability to compete effectively may very well depend upon your ability to change. Whether in response to fluctuating customer demands or market conditions, rapidly modifying service offerings is becoming essential for business survival.

Unfortunately, this mandate for business agility places increasing stress on IT organizations. Existing system architectures with islands of data and technologies that don't "talk to" one another mean seemingly simple requests from the business may require months of development and integration work. By the time IT is able to complete development, the window of opportunity for the business may have passed. Frustration – on the part of both business users and IT – abounds.

In an effort to reduce development effort and achieve true agility, savvy companies are exploring the possibility of deploying service-oriented architecture (SOA). By facilitating the development of applications as modular business services that can be easily integrated and re-used throughout the organization, SOA does indeed hold the promise of flexible change. But implementing SOA effectively has presented a daunting challenge all its own – particularly in an economy when constrained budgets are the norm rather than the exception.

Today's companies simply don't have the requisite financing, time or human resources to implement SOA with a top-down, design-heavy approach that will fail to deliver results for years. Yet, building Web services simply for the sake of building Web services is equally disastrous. How can today's IT managers and CIOs realistically propose SOA and quickly deliver benefits without risking their jobs?

With more than 20 years of deep database, development, and consulting expertise, Rolta TUSC can help ensure your SOA success.

SOLUTION OVERVIEW

Building on 20 years of consulting and development expertise, Rolta TUSC consultants combine a business-driven, iterative SOA process with the first modular, adaptable SOA platform – *iPerspective*. Together, these offerings provide the framework for a directed "bottoms-up" approach that substantially mitigates business risk compared to historical SOA implementations. Ultimately, we enable faster, more successful SOA deployments that allow organizations to experience the benefits of SOA today rather than tomorrow. Our solution centers around:

SOA-Today Services—We guide you through an iterative process with four critical stages: education, assessment/visioning, rapid deployment of targeted Web services, and process evaluation/refinement.

iPerspective Tool—Our 100-percent standards-compliant tool enables you to create Web services in minutes to consolidate access to your data and procedures. By quickly modeling services for your users, you can incorporate their feedback and better support agility.

BENEFITS

- **Achieve rapid ROI through quick wins**—Because our methodology and tools enable you to build Web services in a fraction of the traditional time, you begin creating business value within days to weeks. You're able to build momentum and create business justification for future SOA projects.
- **Empower business agility**—Users will quickly notice improvement in your ability to deliver solutions that meet and exceed their needs, allowing them to become increasingly agile.
- **Lower total cost of ownership**—Increase efficiency and reduce development costs through code re-use, and lower maintenance costs by retiring or modernizing legacy assets.
- **Leverage one-stop-shopping with an end-to-end solution**—Rolta TUSC combines the best in SOA consulting with an innovative software tool and flexible delivery, providing one central source for your SOA needs.

SOLUTION DETAILS

Rolta TUSC delivers its recession-proof SOA strategy and distinguishes itself from the competition through the integration of four key solution components:

SOA Consulting Services – At Rolta TUSC, we believe that deploying SOA with a user-centric, incremental approach will enable you to experience the benefits of SOA immediately rather than years down the road. Our SOA-Today service takes clients through a participative design and development process with four critical stages:

- **SOA Bootcamp**—Our one-day training provides both business and IT professionals insight on the latest SOA principles, practices, success factors, and benefits, and ensures investment in the process.
- **SOA Visioning**—This stage focuses on uncovering your business user's specific needs rather than focusing principally on your technology systems. We formulate an SOA vision that is aligned with both your business strategy and user requirements and identify the first "quick-win" opportunity.
- **SOA JumpStart**—Utilizing our innovative *i*Perspective software, we begin developing Web services that can be immediately deployed to the business. Within days, users are able to see and provide feedback on services, keeping them invested in the process and ensuring a quick win.
- **SOA Retrospective**—After evaluating initial successes and identifying areas for improvement, we deliver a business case for your SOA program. With feedback from Retrospective, we then repeat the iterative process (beginning at Visioning) for your next release or stage.

Our 100-percent standards-compliant tool enables you to rapidly create Web services to consolidate access to your data and procedures without forklift upgrades. It features an intuitive point-and-click interface, a built-in security layer and data federation capabilities. With *i*Perspective, you can create Web services in minutes rather than the weeks or months other tools require. As a result, you're able to demonstrate functionality to your users frequently and obtain critical feedback to fine-tune your approach.

Knowledge Assets—Because our solution is built on an open-adaptor model, we can easily "plug in" Web services and templates we've previously built, further reducing your time to deployment. We have existing knowledge assets across most vertical industries.

Flexible Delivery—Not only can Rolta TUSC consultants deliver services within the walls of your own organization, but we also provide a "cloud-enablement" offering for companies that prefer to off-load infrastructure maintenance.

ABOUT US

The Rolta SOA Center of Excellence builds on TUSC's 20 years of leadership in technology consulting, delivering value and cutting customer costs through service oriented architecture solutions. An Oracle Certified Advantage partner, Rolta TUSC provides expert functional and technical solutions in the areas of Oracle E-Business Suite Consulting, Enterprise Performance Management, Business Intelligence / Data Warehousing, Oracle and Open Systems Development (includes Fusion Middleware), Oracle DBA, Database, and Infrastructure Services, Managed Services for Remote DBA and E-Business Suite Support, Managed Hosting, Oracle Software Licensing, and Oracle Training & Mentoring.
