

TORONTO HYDRO

Toronto Hydro–Electric System Limited is the regulated "wires" affiliate of Toronto Hydro Corporation and is the largest municipal electric distribution utility in Canada. They are an amalgamation of six separate utilities which had six separate data models and standards prior to the initial project to migrate their distribution data into a single model and system.

Rolta was tasked to assist Toronto Hydro with the migration of the six utilities data into one massive spatial database. This migration task was developed with the assistance of Intergraph, Toronto Hydro's staff and IPID Services.

With the migration of the utility districts complete, Rolta was tasked to provide ongoing services to assist Toronto Hydro in data clean-up and white space management services. Rolta is responsible for delivering weekly database exports of Toronto Hydro's data updates, which Toronto Hydro then loads, publishes, and performs Quality Audits using the approved Rolta QA/QC procedures.

Additional work scope was recently incorporated to enhance the civil model and network in the company's data.

About Rolta

Rolta's knowledge of Geospatial Information Systems is based on our total commitment to quality and the achievement of excellence in the products and services we offer to our clients. Our organization has been globally recognized for its success in adding value to our customers and partner's businesses.

Through our investment in people, technology and infrastructure, Rolta has aggressively met emerging opportunities and enjoyed sustained financial growth. Rolta integrates its diverse knowledge and strategic alliances into innovative solutions that empower customers to address business challenges decisively and successfully.
